External tests of ankyra-lite, each test set scored once on 19 October 2026, after the run had been frozen. The carrier was trained anew for each test set with the released recipe R (the test set's own training set and windows borrowed from the study's populations) under the unchanged anchoring layer and the seasonal-naive state rule; circles: six seeds averaged, grey diamonds: the three-seed release configuration. LCL, UNICON and HKUST: first read of this candidate on a previously read population (earlier forecasters had been scored there and the anchoring layer was fixed after that); GoiEner households out of time: a same-source out-of-time supplementary check (new households and a later period of study population 6), not a new population; Helsinki: trained, anchored and sealed, not scored. Improvement of ankyra-lite's hourly error over the second forecaster (unit-equal RMS ratio; positive = ankyra-lite lower); 95% intervals combine the unit-and-month bootstrap with the spread over seeds (Welch); filled = the interval excludes zero (resolved), hollow = not resolved, which is not a finding of no difference; an interval end beyond the axis is drawn as an arrow. a–c: the three pre-specified primary readouts of each test set (15 nominal intervals over the five test sets, no multiplicity correction: with no true difference about 0.75 of them would be resolved by chance). d–f: the same contrasts by forecast day (six seeds). g–i: descriptive contrasts with ankyra-lite's own reduced configurations (g: six seeds; h: three seeds; i: six seeds, unit-and-month interval only). LCL is in the pretraining data of TimesFM 2.5, Chronos and Chronos-2, which favours TimesFM in a and d; whether GoiEner is in it is not verified; UNICON and HKUST are not on the published lists, which does not establish absence.

Windows / units / months of the primary readouts: LCL 710 / 710 / 5; UNICON 450 / 59 / 23; HKUST 89 / 29 / 8; GoiEner HH 1,417 / 282 / 6. Source: results/external_tests.csv (every row cites the field of the score record it was copied from).
