ankyra-lite (the carrier of the released recipe R with three seeds averaged, anchored, weekly seasonal naive on state windows) against reduced and alternative versions of itself, hourly error on the test windows. Unit-equal improvement with 95% unit-and-month intervals; filled = interval excludes zero; positive = ankyra-lite is better. Shaded: the six release test populations. c: recipes F and V are those of figure 18; every other carrier and recipe is anchored by the same layer.
