Prediction intervals on GoiEner households (696 units, 696 windows): the anchoring layer's interval readout around ankyra-lite's delivered trajectory (after the continuation layer) and the native quantiles of two foundation models. b: ankyra-lite's improvement in the unit-equal Winkler score over each interval; * 95% unit-and-month interval excludes zero. Computed after scoring, as a description. ankyra-lite 0.2.0: carrier recipe Rw (trained from scratch with early stopping on the 93-day validation set, then 8 more epochs with the validation span returned and each training window's loss weighted by the inverse-noise rule; six seeds averaged; figure 1b), the anchoring layer, the state rule and the origin-continuity layer; hourly errors score the delivered trajectory after that layer, energy, level and peak are read before it (readout rule A).
